Colombian testing labora-
tory

BAUR solution: Dielectric oil
analysis with the BAUR DTL
C

**For laboratories and network opera-
tors around the globe, the outstanding**
feature of oil testers from renowned
company BAUR is their reliability. An
excellent example of this is provided
by the highly regarded Colombian
testing laboratory Transequipos,
which specialises in carrying out
dielectric oil analyses. Their accredita-
tion by ONAC and IDEAM means that
the precision and quality of the results
are of vital importance.

The specialists at Transequipos previous-
ly struggled with the challenges of an
analogue tester, which was a significant
hurdle. As laboratory director Q. Herney
Londoño explains: "Achieving consistent
results caused us difficulties, which led to
stress and uncertainty."

Automated measurements with the BAUR DTL C

The solution to this problem came with
the introduction of the state-of-the-art
BAUR DTL C oil tester. As a result, mea-
surements are now automated and the
devices are programmable. These prop-
erties enable reproducible and traceable
measurement results – a crucial criterion
for accredited oil testing.

User-friendliness is appreciated

As Londoño explains enthusiastically:
"The measurements offered by the DTL C
are extremely user-friendly, as they start
automatically as soon as they are select-

ed. We therefore work more efficiently
and intuitively with the oil tester from
BAUR." What is particularly important
for the technicians at Transequipos is the

tester.

certainty that repeated measurements
yield identical results.

BAUR also impresses with the great service that accompanies its devices

In addition to the outstanding function-
ality of the devices, Londoño is delighted
with the excellent support provided by
BAUR: "We really appreciate the service
and performance of the technologies
supplied by BAUR. The biggest advan-
tage for us is the prompt support we re-
ceive whenever we have questions about
the use of the device or its maintenance.
Overall, we are extremely pleased with
our partnership with BAUR and can high-
ly recommend the company's products
and services to other experts in our field."
